3 Year Old Girl Dies Of Heart Attack One Day After Taking COVID Vaccine

January 6, 2022

Another [girl dies of heart attack caused by the vaccine](#) that has now been made into a mandate even upon children who are under zero threat of getting severe reactions from the virus. The girl's parents are quite devastated and have taken to the media to express their grief.

According to her mother, a three-year-old girl in Argentina died of a heart attack the day after taking the COVID vaccine that was mandatory for her just to start kindergarten.

Miryam Suárez [told](#) Telefe Tucumán that the vaccine and legislative compulsion killed her child, Ámbar, who had previously been healthy and “full of life.”

“I pre-enrolled her in school so that next year she would enter kindergarten, because now they force you when it comes to the vaccine,” Suárez said. “She was healthy. She was fine. She was not ill and didn’t have COVID.”

On December 16, Suárez accompanied her daughter to go and get immunized. After slumping whilst playing with her friends, Ámbar died the very next day. “She just collapsed and fell.” Suárez exclaimed, “I cannot believe it.”

The authorities “demands so much that they get the vaccine, and I know that the vaccine killed my three-year-old daughter,” the distraught mother explained. “She was fine. She did not have any health issues, nor was she a sick child. She was healthy, full of life.”

“This government that forces you [to get the vaccine] killed my three-year-old baby.”

Ámbar obtained the Chinese Sinopharm vaccination, which Argentina authorized in October for children aged three to eleven.

On December 17, the Tucumán Ministry of Public Health released a statement concerning Ámbar’s death, adding that authorities have initiated an inquiry into the event:

On Thursday, December 16th 2021, at 12:00 pm, a three-year-old patient in cardiorespiratory arrest entered the Emergency Room of Hospital del Niño Jesús. Advanced resuscitation was performed and, when there was no response, [Ámbar Suárez’] death was declared. She has a history of taking the first dose of the Sinopharm vaccine the day before.

Following protocol, police and judicial personnel have intervened and have ordered her autopsy. Considering the history of COVID vaccination, contact with family members has been initiated to gather pertinent information, evaluate other background information, and initiate an investigation of this unfortunate episode.

The year before, Argentina [announced a bold plan](#) to vaccinate every youngster above the age of three by the conclusion of the year 2021, Health minister Carla Vizzotti promised in October.

COVID-19 poses practically zero threat of death or severe disease to children and teenagers. According to the American Pediatric Association, between [0-0.03 percentage](#) of COVID cases in children beneath the age of 18 in the United States result in mortality. For any and all age ranges below 60 years old, the coronavirus survival rate has been approximated at no less than 99.7%.

Children have died and suffered major complications, including heart inflammation and other cardiac problems, shortly after receiving the COVID vaccine. VAERS, the US government’s vaccine harm tracking system, has revealed scores of incidents of children dying just days after being vaccinated.

Vietnam’s Thanh Hoa province [suspended using Pfizer’s Covid-19 vaccine batch after more than 120 students were hospitalized](#) after the vaccination.

According to a clinical psychiatrist for children and adolescents, recent lockdown guidelines and mask regulations in the country are leading to a generation of [children with lower IQs and signs of social brain damage](#).

A major study has found that fully vaccinated [teenage boys are six times more likely to suffer from heart problems from the vaccine](#) than be hospitalised from Covid-19.

Recently, a 16 year old [teenager was awarded a \\$225,000 compensation after suffering a heart attack from the Pfizer COVID-19 vaccine](#) by the Singapore's Ministry of Health.

Earlier it was revealed, the Pfizer coronavirus [vaccine may be linked to a form of severe eye inflammation called uveitis](#) which can lead to permanent loss of vision, according to a multicenter Israeli study led by Prof. Zohar Habet-Wilner from Tel Aviv's Sourasky Medical Center.

[COVID vaccines are "irreversible and potentially permanently damaging,"](#) says Dr. Robert Malone, who explains why 16,000 physicians and medical scientists around the world signed a declaration publicly declaring healthy children should not be vaccinated for COVID-19.

On Sunday, a senior epidemiologist at AIIMS and the institute's lead investigator on the Covaxin test for adults and children, claimed the [decision to vaccinate children against COVID by the Govt is unscientific](#) and stated that it wouldn't be additionally beneficial in any aspects.
